WORK EXPERIENCE

PayPal

Feb 2022 – Present

Sr. Staff Engineer

Remote (Seattle)

- Technical governance leader responsible for setting engineering standards, defining code review and deployment practices, and driving architectural best practices across Braintree's platform.
- Serve as a strategic technical partner to engineering, product, and partnerships teams, ensuring scalability, reliability, and quality in both legacy systems and new product development.
- Network and card scheme compliance subject matter expert, partnering with Product and Partnerships to build and maintain an intake process for card network mandates and updates—triaging, interpreting, and prioritizing over 600+ network rule changes annually. Additionally, drive risk mitigation and compliance alignment with card networks, reducing incidents from mandate non-compliance.
- Advisor and mentor to tech leads and engineers, providing guidance on architecture, API design, and developer experience standards.
- Lead development of AI-powered developer tooling, including systems to automate tasks like feature flag retirement and dead code cleanup, improving developer velocity and codebase hygiene.
- Drove the adoption of Sorbet for gradual type checking in Braintree's large Ruby on Rails monolith, improving code safety, reducing runtime errors, and enabling safer large-scale refactors.

Stripe

Aug 2020 – Feb 2022

Technical Operations

Seattle, WA

- Provided payments subject matter expertise for escalations from operations and accounts teams, while advising engineering on card network and processor implementation details
- Collaborated with engineering and card network technical teams to implement new features and compliance requirements while minimizing merchant impact
- Delivered code changes that reduced payment error rates by 30 basis points and increased transaction approval rates
- Developed automation for operational processes and enhanced internal tools to increase self-service capabilities for internal users

Braintree

Aug 2016 – July 2020

Software Engineer

San Francisco, CA

- Developed and maintained 14+ payment processor integrations within Braintree's core payment processing platform
- Established expertise in credit card processing, card network compliance, and integrations with major card schemes
- Led scaling initiatives for processing and settlement systems to support Braintree's rapid growth
- Managed on-call rotations ensuring 99.99% availability for mission-critical payment processing services
- Implemented new features in core payment processing systems and APIs to support customer needs and compliance requirements

EDUCATION

Capitol Technology University

2018 - 2020

M.S. Cyber & Information Security

Stanford University

2012 - 2016

B.S. Science, Technology and Society
